Senior Software Engineer — Enterprise Automation & Cloud-Native Platforms

SUMMARY

Senior Software Engineer with 7+ years of experience designing and delivering cloud-native enterprise platforms across banking, telecom, e-commerce, and IoT. Strong hands-on expertise in Java 21/17, Spring Boot, React, PostgreSQL, microservices, REST APIs, event-driven architecture, and Kubernetes/OpenShift. Experienced in leading enterprise automation initiatives, ITSM and change-management integrations, CI/CD, observability, secure API design, legacy modernization, and production delivery in highly regulated environments.

PROFESSIONAL EXPERIENCE

Senior Software Engineer / Technical Lead — Bank of America

NC | Aug 2026 - Present

- Architect and lead delivery of a cloud-native Automation Engine that modernizes enterprise patching and infrastructure repaving, centralizes lifecycle orchestration, and enables the transition to container-based automation and Speedy EPAS.
- Own the end-to-end architecture and development of a centralized Change Request (CRQ) Automation Platform using Java 21, Spring Boot, REST APIs, and PostgreSQL, automating ITSM change workflows while strengthening auditability, traceability, and operational control.
- Deliver full-stack capabilities with React, Java 21, Spring Boot, PostgreSQL, and microservices, building reusable services and user workflows that automate enterprise infrastructure operations and reduce manual orchestration.
- Lead cloud-native build, deployment, and release practices across Docker and OpenShift/Kubernetes using Jenkins/Horizon, Maven, and JFrog Artifactory, standardizing CI/CD, environment promotion, and production-readiness controls.
- Strengthen engineering quality and production supportability with JUnit 5, REST Assured, Testcontainers, SonarQube, Splunk, SLF4J, and Spring Boot Actuator, embedding automated testing, code-quality gates, logging, health checks, and observability into delivery workflows.
- Provide hands-on technical leadership across solution design, implementation, code reviews, mentoring, and stakeholder alignment, partnering with DevOps, Security, Infrastructure, UI, and ITSM teams to deliver secure enterprise-scale automation solutions.

Senior Software Engineer — Verizon

TX | Feb 2025 - Aug 2026

- Modernized legacy telecom workflows into cloud-native, event-driven microservices using Java 17, Spring Boot, WebFlux, Kafka, and AWS, improving scalability, fault isolation, and deployment flexibility.
- Designed and delivered 30+ REST APIs across distributed services, reducing duplicate backend logic by 40% through reusable service-layer patterns and standardized API structures.
- Implemented asynchronous integration workflows using Kafka, RabbitMQ, and IBM MQ to connect modern microservices with legacy enterprise systems during the TracFone integration.
- Built real-time internal UI modules using React.js, Redux Toolkit, and TypeScript, reducing UI latency by approximately 40% through state, API-response, and rendering optimizations.
- Optimized PostgreSQL/MySQL access patterns and strengthened security, logging, release validation, and production troubleshooting across distributed Java/Spring Boot services.

Software Engineer — SLHT Services

NJ | May 2023 - Feb 2025

- Built enterprise workforce-management applications using Java, Spring Boot, Spring Security, REST APIs, and microservices across the full software development lifecycle.
- Developed secure backend services with JWT authentication and role-based authorization, supporting consistent access control and internal compliance requirements.
- Delivered operational dashboards and admin interfaces with Angular, React.js, Highcharts, and Chart.js for real-time reporting, visualization, and decision support.
- Designed and optimized PostgreSQL/MySQL schemas, SQL/PL-SQL queries, indexes, and data-access patterns to improve reporting performance and data accuracy.
- Deployed containerized services on AWS using Docker, Kubernetes, Jenkins, EC2, ECS, RDS, S3, Lambda, and API Gateway; supported automated testing, CI/CD, release validation, and production issue analysis.

Graduate Research & Teaching Assistant — Columbus State University

GA | Jan 2022 - Dec 2022

- Designed and implemented energy-efficient, hardware-secured communication protocols for IoT devices, focusing on mutual authentication, trusted device identity, and edge security.
- Architected a hardware-secured mutual authentication protocol using Zymkey, enabling trusted identity verification across distributed IoT and edge-computing environments.
- Presented research at an ACM conference, contributing to applied research in IoT authentication, secure device communication, and edge security.
- Assisted instruction in Python, Java, SQL, and Database Design, supporting students through labs, assignments, debugging, technical guidance, and one-on-one mentoring.

- Mentored students in computational thinking, secure computing concepts, programming fundamentals, and robotics, translating complex technical concepts into accessible, age-appropriate instruction.
- Served as a Summer Camp Instructor for students in grades 6–10, teaching Python, cybersecurity, and robotics through hands-on projects, coding exercises, and guided labs.

Software Engineer — Silicon Matrix

India | Jun 2019 - Aug 2021

- Developed customer-facing e-commerce features using React, Redux, JavaScript, HTML5, and CSS3, including reusable components and modular frontend patterns.
- Implemented secure REST APIs using Java, Spring Boot, and JWT authentication for CRUD operations, user workflows, and backend integrations.
- Resolved SQL performance bottlenecks and contributed to modernization of legacy Spring MVC applications toward Spring Boot services and cloud-ready deployment patterns.

TECHNICAL SKILLS

Languages: Java 21, Java 17, TypeScript, JavaScript, SQL, Python

Backend: Spring Boot, Spring Security, Microservices, WebFlux, REST APIs, Hibernate/JPA, Distributed Systems

Frontend: React.js, Angular 12-16, Redux Toolkit, HTML5, CSS3, Highcharts, Chart.js

Cloud & DevOps: AWS, Docker, Kubernetes, OpenShift, Jenkins, Horizon, Maven, Gradle, JFrog Artifactory, CI/CD

Messaging & Integration: Apache Kafka, RabbitMQ, IBM MQ, WebSockets, Event-Driven Architecture, ITSM/CRQ Automation

Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Database Design

Testing & Observability: JUnit 5, Mockito, REST Assured, Testcontainers, SonarQube, Splunk, SLF4J, Spring Boot Actuator, ELK

Tools: Git, JIRA, Confluence, Swagger/ OpenAPI

EDUCATION

- **M.S. in Applied Computer Science** — Columbus State University, Georgia
- **B.Tech in Computer Science** — Malla Reddy College of Engineering and Technology, India

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Solutions Architect - Associate
- Academic Excellence Award - Columbus State University
- Selected as Graduate Research & Teaching Assistant based on academic performance and technical expertise

PUBLICATIONS & RESEARCH

- [Towards Energy-Efficient Edge Computing for Tiny AI Applications](#) — research on edge-optimized AI inference workflows for efficient deployment, orchestration, and secure communication in distributed AI-enabled systems.
- Mutual Authentication Protocol between IoT Devices and Hardware Security using ZYMKEY — research on hardware-secured mutual authentication for trusted device identity across distributed IoT and edge-computing systems.
